

EverlyWell

PCR Swab At-Home Test

What makes EverlyWell a good option for my organization?

EverlyWell is an at-home do-it-yourself Polymerase Chain Reaction (PCR) test. It's a highly accurate test people can do themselves at home or at work. It's convenient, easy and fast.

Results in about 72 hours.

After registering your kit, you follow online guidance to swab and ship the sample with next-day shipping. Each test kit includes a shipping package with a pre-paid shipping label for FedEx or UPS. You must drop off test kits at the drop locations the same day as your self-swab. Results are available within a few days through an online portal.

What if I test positive from a PCR test?

If you test positive, once we receive your results from the lab, Tacoma-Pierce County Health Department will contact you with instructions to self-isolate. PCR tests are reliable and positive individuals should be excluded from work immediately.
